

Questions/Answers #1

1. Is Baker County interested in using OSDP?

Baker County is open to OSDP

2. Does Baker County wish to have the ID card creation process incorporated into the access control system?

Baker County is open to the inclusion of ID creation into the system. We currently have ID card creation separate from the access control system. How ever you decide to make your proposal one thing to keep in mind is that if your proposal incorporates the ID card creation in the access control system, we would need to still make sure there is a separation in user capabilities. In other words, Baker County needs to be able to designate a user that can create an ID but not program that ID with access, and then designate a different user that can program access onto an ID but not create the ID medium. Our volume, after initial installation, is typically less than 5 new ID cards created each month.

3. How many user terminals does Baker County need?

We need 2 for redundancy purposes.
