General Notes

1. The contractor shall verify all existing conditions and dimensions at the job site to ensure that all new work will fit in the manner intended on the plans. Should any conditions exist that are contrary to those shown on the plans, the contractor shall notify the engineer of such differences immediately and prior to proceeding with the work.

2. The contractor shall comply with all conditions as set forth by the issued St. Johns River Water Management District Environmental Permit and the Florida Department of Transportation roadway connection permit. The contractor shall submit a notice of construction commencement to the water management district at least 48 hours prior to the beginning of construction.

3. The contractor shall maintain the construction site in a secure manner. All open trenches and excavated areas shall be protected from access by the general public.

4. Any public land corner within the limits of construction shall be protected. If a corner monument is in danger of being destroyed and has not been properly referenced, the contractor should notify the utility engineer.

5. The site is located in section 17, township 3 south, range 20 east, Baker county, Florida.

6. The contractor shall implement all components of his erosion and sedimentation control plan prior to any earth disturbing activities. All components shall be maintained by the contractor until all vegetation is established. The entire project area is stabilized and the owner has accepted operation and maintenance.

7. The stormwater basin is designed in accordance with chapter 104-00 and 62-330 F.A.C.

8. All slopes of the stormwater basin shall be braced. All 1:3 slopes shall be sodded and slopes steeper than 1:3 shall be stapled 500.

9. All disturbed areas not sodded shall be seeded with a mixture of long-term vegetation and quick growing short-term vegetation for the following conditions. For the months from September through March, the mix shall consist of 70 pounds per acre of long-term seed and 20 pounds per acre of winter rye. For the months of April through October, the mix shall consist of 70 pounds per acre of long-term seed and 20 pounds per acre of millet.

10. The location of the utilities shown in the plans are approximate only. The exact location shall be determined by the contractor during construction.

Conclusions on the plans shall protect all utilities within the project areas. The contractor shall contact B.S. 1-800-432-4170 at least 2 business days before beginning construction.
